Dave, =20

Chuck Dachis, The Hallicrafters Collector, in his book, "Radios by Hallicrafters," copyright 1996, lists a price for the SX110 as \$75 to \$100. It could only have gone up since then.

In case you meant the SX100 instead of the SX110, Chuck Dachis lists the =  
SX100 at \$200 to \$250.

Subject: Web Page on Howard Communications Receivers

Content-Type: text/plain; charset=us-ascii; x-mac-type="54455854"; x-mac-creator="4D4F5353"

Content-Transfer-Encoding: 7bit

My primary area in collecting boatanchors is pre-war receivers of which Howard was a player. After finding virtually nothing on this topic on-line, I thought a web page would be appropriate on this obscure subject. I just completed a web page on the Howard Communications receivers of the 1930s and early 1940s using materials from my own Howards and what I have been able to find over the past couple of years. Although this may not be totally related to the list you are receiving it on, it is boatanchor material and some of you may have a Howard receiver.

Any comments, suggestions or additional material would be much appreciated.

I also have a page on Breting receivers which I just updated with a few new photos.

You can reach these pages through my main web page which can be found at:

<http://members.cox.net/n7rk/>

I am trying to locate information on a looks like Pre-WW-II German Military radio. Either Telefunken or possibly Siemans Model number SE469A has 10 tubes all tubes are like pre war and some are covered with foil and just glass with tube number and all have the German Swastika on them, except one from Sweden made in 48 and was a replacement for a missing tube. Would like any schematic, manual or history of the unit. Value, year made any help appreciated. Not the size or weight of a R-390. Thanks es Happy New Year to all

I was reluctant to ask about this rig but since it has a ceramic final, here

goes.

I have a Signal One transceiver that is not operational and wondered if anyone on this list has any experience with this rig or knows anyone who has experience with it. I am reluctant to go into it without some basic questions being answered first. Although I am fairly comfortable working on tube gear my solid state experience is very limited.

Subject: BOULEVARD ELECTRONICS RECIEVER

Message-ID: <20030105.110856.2380.0.jackiv@juno.com>

MIME-Version: 1.0

Content-Type: text/plain; charset=us-ascii

Content-Transfer-Encoding: 7bit

From: jackiv@juno.com

I bought a reciever at a hamfest yesterday. I located it in both the Moore and Osterman books.

It supposedly is a reciever that was sold in kit form or assembled from parts of terminated

Coast Guard contract. About 1952 Or 53. An 11 tube AC/DC rx, 6 bands from about 250 kc to 18 mhz.

The front panel is drilled for a nameplate on the left side of the chasis.

Can anyone supply any info on this set? It does power up and hears some signals but the images are vicious.

It must be re-aligned as some if slugs are almost all the way in.

Look in your references, possibly help???

tnx jack jackiv@juno.com

I have a huge box of Ham Radio magazines, free for the pickup in Madison, Wisconsin. They start somewhere in early '72 and end in mid '88, almost two decades worth. I think the collection is essentially complete but it has been years since I checked. They are in good condition with the original mailing covers on many years.

Free, but pick up in Madison, Wisconsin only!

Hi Gang:

I have one and do not intend on keeping. Unit is almost new and appears to complete.

Unit is used for supplies power to the R-391 auto-tune circuit when the receiver is used with its associated remote control equipment.

I think a \$25.00 + shipping would be a fair price for someone who has a R-391 unit they are trying to get running.

Let me know if you need one

Subject: Wanted Bassett 75 M coils  
Date: Sun, 5 Jan 2003 22:41:17 -0500

Antenna guru Rex Bassett W4QS had a great article in the September 1955 CQ where he gave design specs for his Helium filled coils for both mobile and fixed use. These were very popular with AM mobilers in the mid and late 50's. A W6 ran a 500 watt amp and my friend Raymond W5WYN used one with his AF-67/PMR-7 combo.

I asked on several newsgroups but no soap so I am asking here...anyone have

one (or more) laying around. I am looking for the RM-75S and RM-80S.

Subject: Navy DAE-1 radio direction finder info  
Content-Type: text/plain; charset="us-ascii" ; format="flowed"

Anchorites,

During the Christmas break, put a Navy DAE-1 radio direction finder  
on the bench. Pix and report at:

<[http://oak.cats.ohiou.edu/~postr/bapix/DAE\\_1.htm](http://oak.cats.ohiou.edu/~postr/bapix/DAE_1.htm)>

Anyone have first-hand experience with one of these in the Navy?

What was the main purpose of the device? on destroyers for submarine locating?

Was the location direction more accurate based on a null? I assume  
the sense antenna was to determine whether the loop was looking at  
the signal or whether it was 180 degrees off. Having never before  
touched an RDF, any tricks or operating criteria?

Fun to play with on BC broadcasts!

73,

Rich

Normally with loop antennas you first find one nul, then swing it 180 degrees for the second nul. You use the average of the two. The sense antenna is for finding which 180 degree direction is the correct one.

Content-Type: text/plain; charset=us-ascii

Hello Group,

Some time ago, I was approached by Radio Daze Press for permission to use one of my web photos of the E.H. Scott RCK receiver. In turn, I received a complimentary copy of the new 240 page, 8.5 x11 book titled "E.H. Scott....The Dean of DX". (Expanded Second Edition)

For those of you in the group who are interested in E.H. Scott radios and want further info, point your browsers to: <http://www.radiodaze.com>

The photos are stunning and the last portion of the books contains a section of schematics for the various receivers.

Content-type: text/plain; format=flowed; charset=us-ascii  
Content-transfer-encoding: 7bit

The R-388 top and bottom cover sets are now ready to ship. The top cover will have YOUR choice of the 388 J-3 or the 388A J-4 schematic on the

underside. This has been silk screened onto adhesive backing material along with a clear plastic overlay so you can mark and erase when working on the receiver. The covers do not have the tools or the tool holders. The holes are punched for the holders, if you can find them.

The covers have a very solid Gold alodine surface finish.  
I have orders from Barry, Jim, Tom and Rodney. I have 8 sets left.

First come first sold.

The time to send money is "NOW" !!

The set is \$80.00 packed and shipped Domestic. International orders postage to be determined. Payment: Cash, Postal money order, Personal checks from known customers OK others to clear, Paypal, Bidpay.

Please specify desired schematic. J-3 or J-4

I also have extra schematics to apply to your covers at \$17.50 each mailed. Peel off the backing and apply to any clean smooth surface. Spray surface with windex, apply schematic and then use a squeegee to smooth out the overlay and get the windex out from under. IT WILL STICK.

Thanks,

Hank
